SSR MS3

★ It takes one hand to count the number of great wheel builders; SSR is among that short list. The SSR Professor MS3/MS3R is quite possibly one of the sexiest new designs we've seen in years—classic yet modern, strong yet light. New for spring 2012, the Professor MS3 features three-piece construction and available in widths from 7 to 13.5 inches (stepped lip), 5.5 to 12 inches (reverse lip) and a very large offset range. Standard colors are Titan Silver, Flat Black and Standard Silver.

GAZ ADJUSTABLE SHOCKS FOR JAGUAR XJ-S

★ The Jaguar XJ-S never had quite the same sporting image as the E-Type that it replaced but, reasonable examples are considerably more affordable, and as such, the XJ-S continues to be extensively campaigned in club level motorsport both in the United Kingdom and elsewhere overseas. GAZ can provide race shocks for the XJ-S that are bump and rebound adjustable and can be quickly adjusted by means of an easily accessible single knob on the side of the tube. Although these dampers are built specifically for racing with valving to suit, GAZ can also provide very similar dampers for road and rally use as well. GAZ dampers feature a zinc plated body and durable plastic sleeve that should keep them looking good and working well for long into the future. All units are individually tested before leaving the factory and are covered by a two-year warranty.

CHAOTIC CONNECTIONS

★ Is your economic situation still such that you can't afford that new, shiny part? Tired of playing the same old board games on family game night? Well, for less than the price of a tank of fuel pick up a copy of Chaotic Connections, a brand-new board game that will appeal to gearheads of all ages. Take a road trip across this great country as you try to build roads to connect randomly dealt cities before your opponents connect theirs. And just like any road trip we've ever taken, there are obstacles to overcome: Curve Cards, Road Blocks and Detours may cause a case of board game rage. The basic rules are simple while advanced players can apply strategic maneuvers along the journey, making the game appropriate for players ages 9 and up. Two to six players. \$30

034 2.0T COIL CONVERSION KIT

★ The ignition systems found on Audi 2.7Ts are problematic. The archaic system of separate ignition control modules (ICM), spark plug boots and individual coil packs is prone to random misfires and inconsistent spark energy. The engineers at 034Motorsport know that even if you can diagnose the problem, parts are expensive, costing upwards of \$900, and the technology is still outdated. The 034Motorsport 2.0T FSI coil conversion and plug-and-play ICM delete harness eliminates all of the old tech and updates it with the latest and greatest Audi technology. Harness kit: \$325. Six coil adapter brackets and hardware: \$120. Six OEM 2.0T FSI coil packs: \$120
